

Uploading MyHeritage DNA results to FamilyTreeDNA

Adding your MyHeritage DNA results to FamilyTreeDNA could not be easier. This is because FamilyTreeDNA already have your DNA as they process all DNA samples for MyHeritage - so all they need is permission to add your results to the FamilyTreeDNA database.

Important: This must be done within 6 months of getting results on MyHeritage or it will not be possible to upload at all. If the upload is not possible the system will tell you this.

Here's what to do:

1. Go here: <https://www.familytreedna.com/autosomal-transfer>
2. Enter the name of the DNA tester, your email and indicate whether the DNA you are uploading is for a male or female.
3. Click 'join today'.
4. On the next page click on 'MyHeritage' and then go.
5. You will then be redirected to the MyHeritage website and be asked to enter your log-in details.
6. The system will then automatically upload your DNA for you.
7. When this is done you will be allocated a kit number and a password will be emailed to you – you will need these to log on to see your new results on FTDNA. Results are usually ready within a few hours.

If anything goes wrong you can contact one the administrators of the North of Ireland DNA Project for assistance on dna@nifhs.org

North of Ireland DNA Project

Once you have results on Family Tree DNA you are welcome to join the North of Ireland DNA Project if you have ancestors from Ulster. To join the project just log into your FTDNA account and, without logging out, navigate here: <https://www.nifhs.org/dna/>

Towards the bottom of the page you will see a link to join our project – just follow the instructions and we will approve you asap. Once approved you will be able to see who you match that also has Northern Irish ancestors and you will also be able to see our project message board.
